| metadata | NY.GDP.MKTP.KD | NY.GDP.PCAP.KD | SP.POP.TOTL |
|----------------------|---|------------------|---|
| Aggregationmethod | Gap-filled total | Weighted average | Sum |
| BasePeriod | 2015 | 2015 | |
| Developmentrelevance | An economy's growth is measured by the change in the volume of its output or in the real incomes of its residents. The 2008 United Nations System of National Accounts (2008 SNA) offers three plausible indicators for calculating growth: the volume of gross domestic product (GDP), real gross domestic income, and real gross national income. The volume of GDP is the sum of value added, measured at constant prices, by households, government, and industries operating in the economy. GDP accounts for all domestic production, regardless of whether the income accrues to domestic or foreign institutions. | | Increases in human population, whether as a result of immigration sustainability. A significant growth in population will negatively impact infrastructure. On the other hand, decreasing population size - a reduction in services and infrastructure. |
